

***Staphylococcus aureus*, Strain HT 20020396**

**Catalog No. NR-46054**

**For research use only. Not for use in humans.**

**Contributor:**

Centers for Disease Control and Prevention, Atlanta, Georgia, USA

**Manufacturer:**

BEI Resources

**Product Description:**

Bacteria Classification: *Staphylococcaceae*, *Staphylococcus*

Species: *Staphylococcus aureus*

Strain: HT 20020396

NARSA Catalog Number: NRS261

Original Source: *Staphylococcus aureus* (*S. aureus*), strain HT 20020396 was isolated in 2002 from the respiratory specimen of a male outpatient in France.<sup>1</sup>

Comments: *S. aureus*, strain HT 20020396 is a clinically-associated methicillin-resistant *S. aureus* (MRSA) strain. Strain HT 20020396 was deposited as negative for *mecA*, positive for the Panton Valentine leukocidin (PVL) components *lukS* and *lukF*, the staphylococcus enterotoxin genes *sea* and the *egc* operon and the  $\gamma$ -hemolysin gene *hlg*. MLST sequencing type (ST) 45, eGenomics *spa* repeat motif WGKAKAOMQ, eGenomics *spa* type 43, Ridom *spa* type t021 and *agr* group III.<sup>1</sup>

*S. aureus* is a Gram-positive, cluster-forming coccus that normally inhabits human nasal passages, skin and mucus membranes. It is also a human pathogen and causes a variety of pus-forming infections as well as food-poisoning and toxic shock syndrome. In 1961, two years after the introduction of methicillin, a penicillinase-resistant penicillin, *S. aureus* developed methicillin-resistance due to acquisition of the *mecA* gene. For the last forty-five years hospital-acquired (HA) MRSA strains have disseminated worldwide. More recently, MRSA strains have been isolated that are not hospital acquired and are referred to as community-associated (CA) MRSA. These CA-MRSA strains differ phenotypically and genotypically from HA-MRSA strains and they are more frequently recovered from skin and soft tissue sources rather than post-operative wounds.<sup>2,3</sup>

**Material Provided:**

Each vial contains approximately 0.5 mL of bacterial culture in Tryptic Soy broth supplemented with 10% glycerol.

Note: If homogeneity is required for your intended use, please purify prior to initiating work.

**Packaging/Storage:**

NR-46054 was packaged aseptically in cryovials. The product is provided frozen and should be stored at -60°C or colder

immediately upon arrival. For long-term storage, the vapor phase of a liquid nitrogen freezer is recommended. Freeze-thaw cycles should be avoided.

**Growth Conditions:**

Media:

Brain Heart Infusion broth or Tryptic Soy broth or equivalent Brain Heart Infusion agar or Tryptic Soy agar or Tryptic Soy agar with 5% defibrinated sheep blood or equivalent

Incubation:

Temperature: 37°C

Atmosphere: Aerobic

Propagation:

1. Keep vial frozen until ready for use, then thaw.
2. Transfer the entire thawed aliquot into a single tube of broth.
3. Use several drops of the suspension to inoculate an agar slant and/or plate.
4. Incubate the tube, slant and/or plate at 37°C for 1 day.
